PROFESSIONAL SUMMARY

Data analyst with a CS degree and hands-on experience across the full analytics workflow: writing SQL and Python to pull and clean data from multiple systems, validating it, and turning it into Power BI and Tableau reporting for stakeholders. Currently working in data operations at an insurance company, handling reconciliation and data integrity on regulated records. Independent project work spans healthcare claims, finance, and sports analytics.

PROFESSIONAL EXPERIENCE

Data Analyst, IBM | New York, NY | Sep 2022 - May 2024

- Automated an end-to-end reporting workflow using Python and SQL, reducing a multi-day manual process to same-day delivery and eliminating recurring data inconsistencies.
- Wrote and optimized SQL queries to extract, transform, and validate data from multiple source systems, building datasets that powered scheduled Power BI refreshes and tracing reporting discrepancies back to source data to resolve root causes.
- Designed and maintained Power BI and Tableau dashboards translating complex operational datasets into clear, stakeholder-ready visualizations presented to leadership across 6+ cross-functional teams.

Data Operations Specialist, Amalgamated Life Insurance Company | White Plains, NY | Sep 2025 - Present

- Perform data validation and reconciliation across internal insurance systems, verifying and correcting pension and benefits records to maintain data integrity and compliance standards on regulated data.
- Built Excel-based audit logs, tracking templates, and macros that automate recurring documentation workflows, standardizing data quality checks and cutting resolution turnaround time.

SKILLS

Core Tools: Python (Pandas, NumPy), SQL, Excel (advanced, macros), Power BI, Tableau, Looker (familiar)

Data Work: Data cleaning, validation, reconciliation, root-cause analysis, outlier detection, statistical analysis, data modeling

Pipelines and Warehousing: dbt (staging, intermediate, mart layers, testing), Apache Airflow, ETL/ELT design, BigQuery, DuckDB, AWS S3, Docker, Snowflake (familiar)

ML and Modeling: Regression, unsupervised similarity modeling (cosine similarity), scikit-learn

Workflow: Git/GitHub, Agile (Scrum), Jira, Jupyter Notebooks, Claude Code (daily AI-assisted development tool)

PROJECTS

Healthcare Claims Analytics | Python, SQL, SQLite, Pandas, CMS DE-SynPUF, Tableau

- Built an ETL pipeline merging 116,000 synthetic Medicare beneficiaries' inpatient, outpatient, and Part D claims (CMS DE-SynPUF, 2008-2010) into SQLite, then analyzed cost drivers, 30-day readmission patterns, and comorbidity burden across 11 chronic conditions. Stroke, for example, adds roughly \$9,980 in annual spend despite affecting only 4% of patients, once other conditions are controlled for.

Economic Indicators Data Engineering Pipeline | Python, Apache Airflow, dbt, AWS S3, Streamlit

- Built and deployed an automated 5-stage pipeline that refreshes 8 Federal Reserve series daily (FRED API, S3, Airflow, dbt, Streamlit), driving a recession-risk signal backtested against all 9 U.S. recessions since 1959 (100% recall, precision tuned from 45% to 56%) and served through a custom dashboard with an accessibility-checked color system and plain-language glossary.

Portfolio Risk Analysis | Python, Streamlit, SQLite, Plotly, pytest

- Built an interactive portfolio risk dashboard backed by a SQLite warehouse of historical price data, computing Sharpe, Sortino, Beta, VaR/CVaR, and max drawdown across up to 25 holdings. Added a Dirichlet-sampled efficient frontier optimizer and a 1,000-path Monte Carlo simulation for goal planning, automated daily price refresh through GitHub Actions, and tested at three levels: unit tests, analytic-solution checks, and headless end-to-end app runs.

Basketball Intelligence Platform | Python, dbt, DuckDB, Streamlit, Docker, nba_api

- Built a local-first NBA analytics platform backfilling 47 seasons and 1.09 million player-game rows into a DuckDB warehouse, modeled by a 5-model dbt staging layer covering 13 passing data quality tests, and served through a 6-page Streamlit dashboard containerized with Docker for portable deployment.

EDUCATION

B.A. Computer Science, Minor in Mathematics | Hunter College (CUNY) | May 2025

Google Data Analytics Certificate | Google / Coursera | 2026
